BTTF2-*Q – 2 Port Taps

BTTF4-*Q – 4 Port Taps

BTTF8-*Q – 8 Port Taps

F-Port Power Extracting Taps

FEATURES

- Support expanded bandwidth up to 1218 MHz
- Enable Cable Wi-Fi® Access Point powering via the F-port
- Improve network performance with signal conditioning plug-ins
- High quality RF connection with auto-seize F-connectors
- Maintain existing install base with compatibility back to “F” series FFT housings
- High level of network resilience with 6kV surge resistance
- Maintain RF and AC continuity with integrated bypass capability

PRODUCT OVERVIEW

ARRIS 1.2 GHz power extracting taps are capable of delivering video, telephony, and data over the broadband hybrid fiber coax system. These taps have all of the same features and performance as our standard Q-series FFT taps, including 12 ampere power passing and surge resiliency, but with the additional feature of power extracting for Cable Wi-Fi applications.

The BTTF*-*Q taps extract power from the cable feeder and deliver it to the Cable Wi-Fi Access Point via the F-Port (Port 1, jumper selectable). RF signals are distributed through the F-ports to the coaxial drop, as well.

* Hum performance can degrade 2-3 dB at 60°C.

* Tap Port 1 may degrade an additional 1 dB RL at -40°C at 5 MHz.

* 2 and 4 Port taps have an additional 0.25 dB loss on tap port 1, 8 port taps an additional 0.5 dB loss on tap port 1

The diagram illustrates a power supply system for a plug-in module. The system consists of the following components and connections:

- Input (IN):** The input terminal on the left.
- Transformer:** A transformer with a primary winding connected to the input and a secondary winding connected to a bridge rectifier.
- Bridge Rectifier:** A bridge rectifier with two capacitors connected to its output terminals.
- Plug-in Module:** A rectangular block labeled "Plug-in Module" connected to the output of the first bridge rectifier.
- Second Bridge Rectifier:** A second bridge rectifier connected to the output of the plug-in module.
- Second Filter Capacitor:** A capacitor connected to the output of the second bridge rectifier.
- Jumper:** A jumper with two terminals, one connected to the output of the second bridge rectifier and the other connected to the output terminal (OUT).
- Test Points:** Two test points, TP1 and TP2, are located at the bottom of the diagram, connected to the output of the second bridge rectifier.
